

Centerboard Trunk Repair

My ballast tank leaks profusely out the center board trunk when I haul it out full of water. I dropped the centerboard by releasing the bracket bolt accessed from under the v-birth. The centerboard lift rope allowed me to drop it easily while resting on the trailer... after the

CORRECT bolt was released. (at first I mistakenly unbolted the compression post bolts)
A neat 7/16 inch hole was cleanly punched through the trunk into the ballast tank.

I cannot reach inside the trunk and appreciate all the help I am getting to see how best to patch it.
