head seacock plumbed to port				X	X	X	X	X

GENERAL NOTES:

All hulls were solid fiberglass, with decks and cabin top cored with marine plywood.

All years of H37C were available with either shoal draft (4'0") or full draft (5'1") keels

Shoal draft keel had slot for centerboard but no record of one ever being fitted

All years were fitted with Kenyon mast and booms.

The new model year commenced in August - i.e. August 1978 saw the introduction of the 1979 model.

Deck mold was retooled in 1982, with different cockpit coambings, location of main traveller, ports & other changes.

Yanmar engine options overlapped in some years. Raw water cooling on "Q" engines was factory converted to freshwater with a Sendure

1984 saw the introduction of two long fixed ports per side and minor trim changes below (i.e. Plexiglass locker covers)
