

H37C Rigging Measurements

Here are the numbers that I sent to Seco South for an estimate. As you know the shrouds are 1/4" and the backstay is 9/32".

Four lower shrouds: 23' 3 1/2" or 267.5"

Two upper shrouds: 43' 9" or 525"

Backstay: 48' 2 1/4" or 578.25"

But I am unsure about the forestay. Those of you with a real forestay. Is it the same as the backstay with a stud end into a turnbuckle? My Hyde forestay is : 47' 9.5" or 573.5". But that is top to bottom, pin to pin. The part of the forestay below the drum is 10.25". So I am hoping Seco South can figure it out.
