

## HUBBELL CORDKEEPER™ SLEEVE

The Hubbell Cordkeeper Sleeve is intended to allow you to bundle the following combination of cord sets without having to remove the plug or boot:

- . One or two Hubbell 30 Amp, 50-foot Molded Cable Sets (Cat. No. 61CM08)

- Plus -

- . One 50-foot TV Cable Set (Cat. No. TV99) and one 50-foot Telephone Cable Set (Cat. No. PH6599)

To apply:

- . Lay out cable(s) to be covered side by side..
- . Beginning with the 30 amp cable set(s), position the molded plug end of each cable set so that the plug ends are staggered approximately six inches apart. (The sleeve will not expand over more than one plug end at a time. By staggering each plug end six inches apart, you can slide the sleeve over the remainder of the cable sets once you've got each plug end started.)
- . Tape the cable sets together just below the last plug end to be pulled through the Cordkeeper Sleeve.
- . Expand and slide the Cordkeeper Sleeve over each plug end.
- . By pushing the Cordkeeper Sleeve from the back, it will expand and slide over the plug ends and down the remainder of the cable sets.
- . Once the entire Cordkeeper Sleeve is installed over all of the cord sets, you should remove the tape that you put on earlier to hold the staggered plug ends together. Then juggle the cable sets so that they are all even with each other and so that there is approximately one foot of cable that is exposed on each end. (This will make it easier to plug into your hull inlets and power center.)
- . Finally, using the roll of tape enclosed, secure each end of the sleeve by applying several layers of tape over each sleeve end.
