

## Main Sail, Reefing, Jib Halyard deck layout

- A** - Starboard side of mast. Halyard for raising main sail (green) is comes down from main sail cable through front shackle on mast block, through deck organizing down to 'B' Rope Cleat. You will have to do some maneuvering to get rope through cleat. I sometimes splice a smaller feed line to get it through. The Back shackle on mast block is for Main Reefing Line
- B** - Rope Cleats. One set on either side. Stbd side is for main and main reef. Port side is for Jib uphaul and downhaul. The up haul line is now attached at roller furler so this cleat is extra. The downhaul is attached to roller furler drum.
- C**- Jib Halyards. Run on the **OUTSIDE** of the lifelines through these shackles to winches. One on either side. Tie a knot on end to keep it from sliding through shackle. There is a winch handle in stbd cockpit locker.
